

INK FEEDER SYSTEM WITH DEGASSING

* Machinery may be different from these images

The standard ink feeder system is based on a pumping system and mini-tank level control with a degassing system.

THE MAIN FEATURES ARE:

- 2 or 10 liters reserve bottle for each color
- Easy way of filling bottles without any risk of soiling the plotter
- Controls the height of the mini-tanks and then checks the pressure of each color
- Ink flow 15-60ml/min

Other continuous ink supply systems can be produced based on customer request (e.g. weight systems with bags, level systems with sensors).
